

- Press Release - For Immediate Release -

## XyEnterprise and Right Hemisphere Partner to Serve CAD Graphics and Content Management Needs in Technical Documentation Environments

- Solution Promotes Effective Re-Use of Graphics and Content in Mission Critical Applications -

September 4, 2003, Reading, MA and San Ramon, CA, USA

XyEnterprise, the leading developer of XML content management and enterprise publishing solutions, and Right Hemisphere, the leading provider of Visual Information Systems (VIS), have announced an integration of their products to support the use and re-use of CAD data and technical content across enterprise creation, management, and delivery environments. This integrated solution will serve engineering, training, and technical documentation creators and users throughout the aerospace, military, and product manufacturing sectors.

The solution components include XyEnterprise's Content@ content management and workflow software and Right Hemisphere's patent pending Deep Server VIS technology. The integration of Deep Server with Content@ creates a complete technical content and graphical information delivery solution. This solution promotes efficient re-use and re-purposing of graphics and text content used to support and maintain complex products. This integration also promotes the creation and delivery of next-generation training and support materials, derived from the source CAD and technical documentation data sets.

"The ability to integrate highly technical data with CAD graphics within a single content management and delivery system serves a number of important market segments," says Richard Pasewark, Vice President Sales and Marketing, XyEnterprise. "Our partnership with Right Hemisphere combines the strengths of two best-of-class applications to fill this need."

"The combination of XyEnterprise's Content @ and Right Hemisphere's Deep Server VIS technology makes for an unassailable business advantage which maximizes the value of CAD data and all other types of digital assets throughout the enterprise," says Michael Lynch, CEO, Right Hemisphere.

The solution enables companies to reduce costs associated with product development, support, and training, drive enterprise systems integration, and use XML and Web Services technologies to create more efficient business applications. The XyEnterprise – Right Hemisphere solution is available now.

### **Learn More**

XyEnterprise and Right Hemisphere will co-host an online Web Seminar on September 10, 2003.

This Web Seminar “*Repurposing CAD and Technical Content*” can be reached at:

<http://xyenterprisedevents.webex.com>. Enroll today for this premium event.

Additional information on the solution can be found in a XyEnterprise – Right Hemisphere White Paper “*Repurposing CAD and Technical Content*” available at:

[http://www.xyenterprise.com/leadership/Right\\_Hemisphere\\_Xy\\_White\\_Paper.pdf](http://www.xyenterprise.com/leadership/Right_Hemisphere_Xy_White_Paper.pdf).

### **About XyEnterprise**

Xyvision Enterprise Solutions, Inc. (XyEnterprise) is the leading provider of single source, multi-channel XML publishing solutions. Its XML content management software – Content@ – and its automated XML publishing engine – XPP – power sophisticated solutions for global leaders in the publishing, technical documentation, financial, government, aerospace and defense industries. Its customers include Boeing, General Dynamics, Northrop Grumman, Sikorsky, Gulfstream, IBM, Sun Microsystems, LexisNexis, and many others. For more information, please contact XyEnterprise at 781.756.4400 or [www.xyenterprise.com](http://www.xyenterprise.com).

XyEnterprise’s Content@ Content Management and workflow application provides an optimized environment for XML content management, business process workflow, and “assemble and publish” capabilities for complex content creation and delivery environments.

### **About Right Hemisphere**

Right Hemisphere [www.righthemisphere.com](http://www.righthemisphere.com) is the leading provider of Visual Information Systems (VIS) that enable product development enterprises to automatically repurpose their existing CAD data for publication in downstream Product Lifecycle applications such as technical documentation, manufacturing and maintenance training, bill of materials and parts management, visual simulation and more. Right Hemisphere's patent-pending Deep Server software replaces manual processes and enables customers to dramatically increase the ROI on the billions of dollars already spent on the creation of product data. By extending the use of product data beyond engineering, across the enterprise and throughout the product lifecycle, customers can transform business processes, cut costs and time to market, and increase service revenues.
